SERIAL COMMUNICATION USING ARDUINO WITH PROTEUS

The screenshot shows the Proteus 8 Professional Source Code window. The main.ino file is open, showing the following code:

```
1 void setup()
2 {
3   Serial.begin(9600); // send and receive at 9600 baud
4 }
5 int number = 0;
6 void loop()
7 {
8   Serial.print("Number is ");
9   Serial.println(number); // print the number
10  delay(500); // delay half second between numbers
11  number++; // to the next number
12 }
```

The VSM Studio Output window at the bottom shows the compilation status:

```
VSM Studio Output
Code insertion tags in file 'main.ino' were not found - peripherals must be configured manually.
avr-size "Debug.ELF"
